AMBROSON'S

RFD #3

Lansing, Michigan

It is a pleasure to offer the following gladiolus bulbs, seeds, and their treatments. Our growing fields and bulb storage are inspected by the Michigan Department of Agriculture. We guarantee each variety to be true to name, and to arrive in good health. Our responsibility is limited to the purchase price. Correspondence is a pleasure, and we grow many varieties not listed here. If you are a quantity buyer, we would like to know of your needs. We are growing a number of seedlings and have several possible introductions under increase. At the Coloma show, we won best seedling and an Award of Merit.

ORDERS No orders for less than \$2.00. All shipments postpaid, unless you request express collect in which case, we will make up the difference in extra count. All orders must be accompanied by remittance in full or 25% cash and balance before shipment. In ordering, late, we would appreciate a list of possible substitutions. Shipment usually April 1st. Five percent cash discount for orders over five dollars, ten percent over ten dollars, fifteen percent over twenty. Subtract this from your invoice or if you like, we will make this up in extra bulbs or overcount. We will give every advantage on size and extra bulbs and will try and give you something new to try. We are certain you will be pleased.

BULB SIZES Large $1\frac{1}{2}$ inches diameter and up
Medium $\frac{3}{4}$ inch and up
Small under $\frac{3}{4}$ inch
Medium size bulbs will give you good bloom,
and most small bulbs bloom.

We are including in our listing DOWN UNDER gladiolus from Australia and New Zealand. Most of these we haven't grown and are listing on the strength of responsible growers recommendations. Both, Pupich, Jenson, Burns and Errey are well known Down Under breeders.

Our planting stock is treated with ARASAN, and our bulbs in storage are DDT dusted.

NEW INTRODUCTION

NANCY We have watched this newest Arnett introduction for two years. It's commercial possibility is great; it's exhibition properties proven. Formal bright scarlet-rose red, Class 452, floret size $4\frac{1}{2}$ - 5 inches; total buds 19; open florets 7; buds in color 5; days to bloom 88; height in field 56 inches. Good shipper, excellent attachment, no crooking and opens to tip, in water. Won American achievement award, grand championship Midland Show, high average scorer in the four NEGS test gardens in 1947. NANCY stands heat, and seldom has a glad with her quality, been offered as a new introduction at such a reasonable price. Large \$1.00; Medium .75; Small .50; bulblets 10 for \$1.00.

DESCRIPTIVE LIST OF RECENT INTRODUCTIONS

WHITE* WHITE CHRISTMAS gave us our most intense ruffling, and is a must for the exhibitionist, our finest new white. TEXAS is pure, tall, and opens nine, should make a fine commercial. WHITE CHALLENGE with its delicate rose blotch does well from all size bulbs. We rank it with Spic and Span, as the best to take ribbons with. We can still win in this strong class with FAIR ANGEL. SILVER WINGS doesn't do for us, what it does for some. the DOWN UNDER BOYS ARE BIG.

CREAM * The competition here is terrific in a strong class. A glad to compete here must be good. LAKE PLACID, THO a trifle late, gave us consistantly good spikes, the heat doesn't bother it. SPARKS was the finest new glad we grew last year, we like it's triangular florets, placement, and number open. LEADING LADY would be our third choice and it's a great. SALMON'S GLORY our best European variety, LADY JANE, Wanda, AND WHITE GOLD, all capable of grand championships.

YELLOW* Spotlight our finest low priced yellow. GOLDEN STATE purer in color but medium propagater. If GLEAM would open up a few more florets the search would be over. MOTHER KADEL and MISS BLOOMINGTON have been standard with the florist for years. OREGON GOLD is the best late. GOLDEN OPHELIA is rated as the top new yellow from down under, GOLDEN BEAUTY is lovely and in demand.

BUFF* Tho the varieties in this class are not numerous, they are outstanding for beauty and performance. Sunlight was in our best ten this year, a show in itself. SUNSPOT holds many open and a heavy winner. Two giants from down under KAWATIRI and ALMA come well recommended.

ALMA (Woods NZ)		.50	.30	.20	12/50¢

SALMON* SPIC and SPAN is one of the finest glads introduced in years. Due to be grown by the millions. GENGHIS KAHN with its ruffling and habits is a close second. Every year we do some winning at the shows with MARION PEARL, its color is superb and will open ten on tall straight spikes. OGARITA was six foot tall in the field for us this season.

PINK* BEAUTY'S BLUSH, was the tallest named variety we grew this season, a cool light pink. Connecticut yankee, with the blotch, and it's sister seedling Yankee lass are tops for exhibition. Cover girl another big robust grower, we call General MacArthur our Shmoo glad, it propagates like rabbits. Ivy Robertson, with it's long flowerhead, can thrill you. Pink Radiance is liked by florists and an A-1 commercial. Eglantine, could be your champ. Blessed Damosel, the most overlooked, a little late, but we cut exhibition spikes right down the row. Pink Charm is very early, Greta Garbo one of our perennial favorites.

ROSE* EVANGELINE has been an exhibition sensation, light in shade, but one of Palmer's best and will stay with us for a long time, shows resistance to many leaf diseases. Saw TOPFLITE at the shows this summer, a lovely color with a future. We have an improved strain of CHAMOUNY with few short flowerheads, an all time favorite with our garden visitors. BURMA, much darker, in our best ten. Venida looked good to us from small bulbs.

LAVENDER* ELIZABETH THE QUEEN in our best ten and as fine a one as we grow. MYRNA FAY is a robust grower with slight flecking, WEDGEWOOD blooms we keep for ourselves, they are smaller, ruffled and so precise. POETS DREAM shades to a cream throat, another bloom or two open on it and it would enter the hall of fame. PATRICIAN is healthy with the ear marks of a coming great, and LONGFELLOW is the new candidate from down-under as well as TUNIAS MASTERPIECE.

BLUE*(Violet) A week color class. Abu Hassen is the best dark blue we have found SILVER GULL the best light blue.

378 ABU HASSEN (K & M 47) 90	.10	.08	.05	pkg 25¢
590 Silver Gull (K & M 46-48)				

SMOKY* Into our favorite color classes. Our garden visitors went for the Smokies and AOC's. VODOO won us a blue on best makeup work at State show. OKLAHOMA and PASTEL can be even nicer, try them with buffs or yellows. TUNIAS MOHAMET, a velvety plum rose with an orange scarlet throat. SAHARA grows like cactus in heat, SUSAN, and old timer, still gives us thrills. BELTRAMI, A smoky orange and so prolific. CAROLINE W GANNETT can be your biggest, STORMYWEATHER looked good to us from small bulbs. We used INTREPID in breeding, held twelve open several times for us. TECUMSEH a needle pointed orange and plum favorite. TONY a big light chocolate with an orange blotch. STORM KING, BUSHFIRE AND TUNIAS ATOMIC BURST, big ones from down under.

ANY OTHER COLOR* Another group of unusual varieties, to us we like to call it an extension of the smokies. HULA HULA and CHOCTAW bloomed freely from bulblets and are eye catchers. ROBINSON CRUSOE an orange with purple peppering is unusual. VAGABOND PRINCE, brown and still a favorite, R B with its huge florlets, JACKPOT to us another smoky plum.

MINIATURES AND SMALL Tops for decorative purposes. For show purposes Nadia is best of all with its many open. Kewpie is a little doll and fine in arrangements. Queen of Bremen is still outstanding with the florists with its lovely lavender. Winter Carnival, White Satin, Starlet, Loveliness, and Thomas E. Wilson are all face up varieties.

The GLADIOLUS is easy to grow and responds well to man's efforts. DDT and similar chemical derivatives are giving thrips a hard time. Diseases are now our number one enemy.

Diseases most active in the field are:

Fungous Diseases - Fusarium Yellow Sclerotinia Dry Rot
 Basal Dry Rot Septoria Leaf Spot
 Botrytis Septoria Corm Rot
 Stemphylium Leaf blight (Red Spot)

Bacterial Diseases - Scab

Virus Diseases - Mild Mosaic White Break Mosaic

Diseases of undetermined cause - Ink Spot

Diseases most active in storage are:

Fungous Diseases - Fusarium Dry Rot Pencicillium Rot

FUSARIUM YELLOWS is one of the major field diseases of gladiolus. This disease has been responsible more than any other factor, for the virtual disappearance from the recent catalog list of many excellent varieties, because of their susceptibility to it. It is caused by a soil invading fungus, can continue to and thru storage, reaches it's maxium destructiveness in dry seasons with abnormally high soil temperatures.

(1) Effective control thru growing resistant varieties. Some of these are Fair Angel, King Click, King Lear, Lake Placid, Maid of Orleans, Purple Supreme, Snow Princess and White Gold.

(2) Sanitation, which includes, cleans stocks, rotation of ground, careful handling, burning of residues, rapid drying and storage.

(3) Use of protective corm treatments.

SCLEROTINIA DRY ROT is common, and in wet seasons may increase to serious proportions. Both a field and storage problem and is most prevelant in heavy soils. Rapid and thorough curing of the corms after harvest will prevent development in storage. Rotation, Sanitation and Chemical Corm treatments are other controls.

BOTRYTIS infected corms should never be planted. Where suspicious, treat the corms as recommended for control of other corm-borne organisms. Corm treatments, in conjunction with crop rotation, usually provide effective control of SCAB. Likewise BACTERIAL BLIGHT. Roguing is best to reduce VIRUS DISEASES, the insect vector still being searched for. Corm treatments also are a benefit in control of INK SPOT.

BUSARIUM DRY ROT causes a brown dry rot of the corm the same as fusarium yellows, other than that they differ. Picardy and it's progeny are very susceptible to dry rot while resistant to yellows. A pre-planting dip with Ceresan has been standard, together with other cultural and sanitary practices. PENICILLIUM DRY ROT is controlled by rapid drying after harvest and good storage conditions. ARASAN dusting before storing we recommend.

One of the best treatments that may be applied to the dormant corms after cleaning them, to help prevent the rotting that occurs between the time of digging and planting is DUPONT'S ARASAN, 30 parts, parzate 10 parts, and 5 per cent DDT 60 parts by weight.

Pre-planting Treatments - New Improved Ceresan at the rate of 1 pound for 50 gallons of water with a fifteen minute dip is standard. Add a little Dreft as wedding agent. Four pounds DUPONT TERSAN in 50 gallons of water plus wetting agent, stir while treating for five minutes is especially recommended for BOTRYTIS control. One half tea-spoon of DUPONT ARASAN dust will treat a hundred bulbs. ARASAN SF a little stronger product, of the same, that goes into solution. Last year we treated half our planting with ARASAN SF. Michigan State Department of Agriculture representative remarked about cleanliness of our stock and especially ARASAN treated plantings. ARASAN is not poisonous.
